Profile Summary

Final-year B.Tech Computer Science student (2027 batch, CGPA 7.03/10) with strong fundamentals in programming, OOPs, data structures and DBMS, and hands-on coding in Python, C and C++. Built an accessibility tool and an AI-driven analytics system, applying problem-solving, modular design and Git/GitHub. Quick learner with team experience (2nd place in a team cybersecurity competition), seeking an entry-level software role at Tata Consultancy Services (TCS) to contribute to client-focused IT projects.

Education

Bachelor of Technology (B.Tech) – Computer Science *2023 – 2027*
Sahrdaya College of Engineering and Technology (SCET), Kodakara | KTU CGPA: 7.03 / 10

Higher Secondary (Class XII) *2023*
PVSHSS, Parapukkara | State Board 88%

Project Experience

CERP – Computer Automation for Disabled People *Academic Project*

- Built a Python tool (pyautogui) that lets users with physical disabilities operate desktop applications hands-free, reducing the need for manual input.
- Automated application launching, keyboard shortcuts and system controls so everyday computer tasks need minimal interaction.
- Designed the system as modular, reusable, accessibility-first components so new features can be added easily.

Foresight_AI – Intelligent Digital Twin System *Academic Project*

- Developed an AI-based digital twin that analyses a user's habits, skills and behaviour patterns to generate predictive insights.
- Built the data pipeline in Python (pandas) to integrate and process real-world datasets for behaviour analysis and forecasting.
- Integrated the Google Gemini API to turn the analysis into personalised self-development recommendations.
- Structured the system into separate ingest, processing and insight modules so the AI model can be upgraded without affecting the rest of the system.

Skills

Programming: Python, C, C++

Core CS Fundamentals: Object-Oriented Programming (OOPs), Data Structures & Algorithms, DBMS, Problem Solving

Data & Databases: SQL (basic queries, joins), relational data modelling concepts, data analysis with pandas

Tools & APIs: Git, GitHub (version control), Google Gemini API, pyautogui

Achievements

- 2nd Place – Hexinox CTF (Capture the Flag), a team cybersecurity competition
